

A woman with long, wavy blonde hair is sitting at a light-colored wooden table in a modern, bright living room. She is wearing a white, textured, long-sleeved top. She is holding a black smartphone in her right hand and gesturing with her left hand towards a small, dark, spherical KADECO MotionBlinds motor on the table. The background features large windows with white roller blinds, a white sofa, and a wooden coffee table with some decorative items. The overall atmosphere is clean and contemporary.

KADECO®

MotionBlinds MOTORS

FROM 10/22

SIMPLE AND SMART

We aspire to have the right motor for you in our KADECO powered by MotionBlinds range, whatever your needs. From wired motors for wall switches to smart home compatible battery drives. Relax with the help of intuitive operating options and control your privacy and sun protection by voice command or via an app when you are not at home. Integrate your systems into your smart home thanks to future-proof technology and fully enjoy the convenience of automatically controlled privacy and sun protection.

IMPRESSIVE BENEFITS

Simply relax

Enjoy superior comfort in your home: MotionBlinds will give you motorised privacy and sun protection that fit perfectly into your life. For example, you can programme your roller blinds to go up or down automatically.

Simply save

Let the devices in your smart home communicate with each other so your sun protection system reacts to the temperature sensor.* Then your rooms will automatically be shaded on hot days - instead of using electricity on air conditioning.

Simply intuitive

Control your system just how you like it. Starting with intuitive pull cords right through to control via voice assistants such as Amazon Alexa, Google Assistant or Apple Siri.

Simply extend

Thanks to their open architecture, MotionBlinds are flexible and can be combined with other systems. For example, MotionBlinds WIRED motors are suitable for integration into complex BUS systems such as KNX. Eve MotionBlinds enable a direct connection to Apple HomeKit.

Simply secure

Simulate your presence by programming scenes and timers. You can control your privacy and sun protection by app when you are out and about.

*Direct connection only possible with Eve MotionBlinds.

INSPIRATIONAL FUNCTIONS

Simply combinable

All MotionBlinds wireless motors (apart from Eve) can be combined with each other regardless of the product. This means you can control all of your sun protection in your home via Bluetooth, bridge or remote control.

Simply user-friendly

LITIO motors offer manual operation via a pull cord directly on the product as well as wireless control. This is especially intuitive and easy to use, even for your guests. With the MotionBlinds WIRELESS and CENTRIO motors, this same functionality can be achieved via an external pull wireless remote control.

Simply silent

Optional SILENT versions of WIRED and WIRELESS MotionBlinds motors are available. In these particularly quiet models, the motors can hardly be heard at the normal noise level in a room.

Simply practical

MotionBlinds wireless motors report the current position of the blinds back to the app via a bi-directional wireless connection. So practical, because it allows you to keep an eye on their status - wherever you are.

EVE MOTIONBLINDS

Just imagine if you could simply control your roller blind with a fingertip or by Siri voice command. Just imagine if you could create schedules in an instant so your roller blind is perfectly adjusted to your daily routines. Well, we have news for you - this is all a reality with KADECO powered by Eve MotionBlinds motors, which can be controlled with your iPhone or iPad thanks to Apple HomeKit.

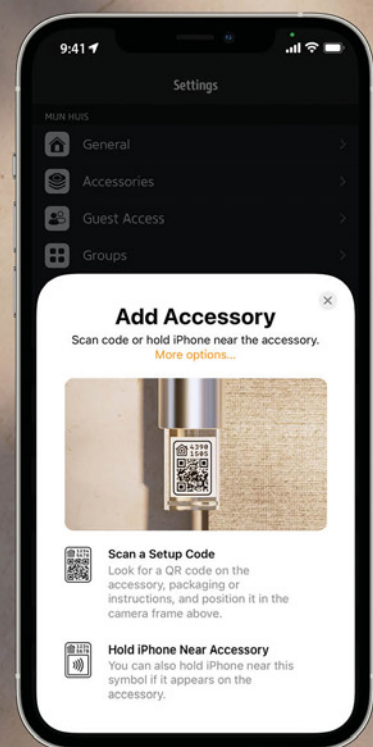

Benefits and functions

Eve MotionBlinds

MotionBlinds Bluetooth

MotionBlinds Bridge

MotionBlinds Wireless

A NEW GENERATION

Smart and easy

Your new level of comfort is just a minute away. Because Eve MotionBlinds can be integrated into your Apple world quickly and easily. Scan the QR code then follow the step by step guide in the app and you're all set!

Quick and user-friendly

Your smart devices are linked together in the Apple System. A HomePod mini or Apple TV allows you to have external access to your control centre at home whenever you need it. Now you can create scenes, programme timers and dependencies and control your roller blinds when you are out.

FOR MORE COMFORT

New and advanced

Your home is now equipped with future-proof technology. Whether with Thread or Bluetooth, by app or voice command. You decide how you control your privacy and sun protection.

Local and secure

Your data belongs to you. Which is why Eve MotionBlinds work without the cloud and without registering. Information is saved locally and does not leave your home.

eve. | MOTIONBLINDS

EVE MOTIONBLINDS MOTOR

The Eve MotionBlinds battery drive is directly compatible with Apple HomeKit. It can therefore be integrated into the Apple Home app to communicate with other devices such as lights, thermostats or sensors.

- Battery drive for roller blinds
- Compatible with Apple HomeKit
- Bluetooth and Thread integrated
- No bridge, registration or cloud required
- Can be linked to other smart home devices
- Additional manual pull control on the product

Standard:
Control via Eve or Apple Home app

Optional extras:
Remote controls
Voice control

Ideal for tenants and home owners.

MOTIONBLINDS

MOTIONBLINDS

Are you looking for motorised sun protection that fits in with the rhythm of your life? That makes your everyday life that bit easier and simply works? You are sure to find the right motorisation system for your needs In KADECO's powered by MotionBlinds range of motors. User-friendly, intuitive, secure.

Benefits and functions

Eve MotionBlinds

MotionBlinds Bluetooth

MotionBlinds Bridge

MotionBlinds Wireless

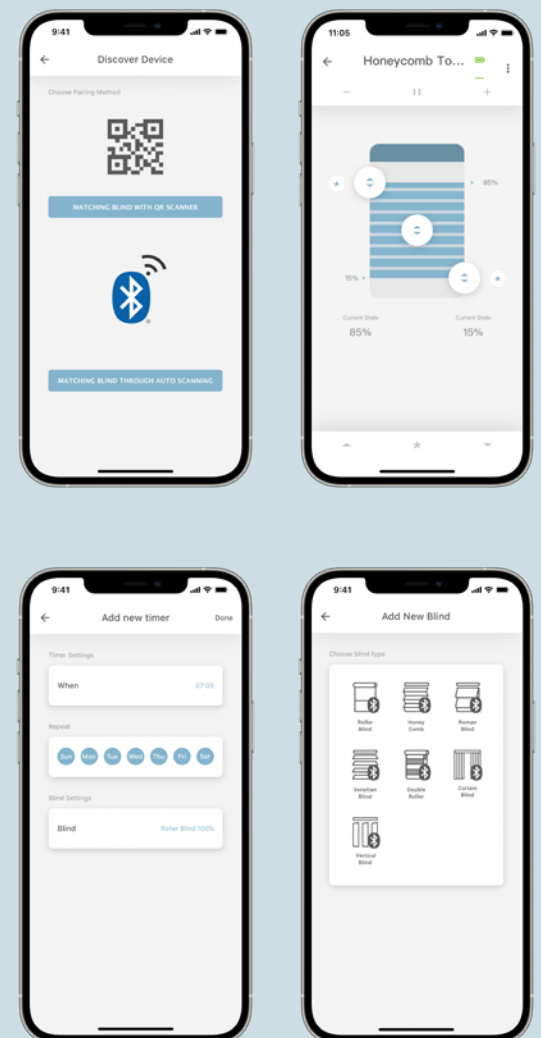

GET STARTED WITH BLUETOOTH

Scan.Connect.Control.

MotionBlinds wireless motors can be used quickly and fully by Bluetooth connection. It's easy to get started: scan the setup code, follow the instructions and you are ready to start. Everything you need: the MotionBlinds Bluetooth app. The data does not leave your own four walls. For total privacy.

One app. Lots of options.

The MotionBlinds Bluetooth app is your smart remote control. Without registration or cloud dependency. You can use this user-friendly app within the roughly 10 metre Bluetooth range to control and automate your sun protection. Programme set times and positions, work with timers or control your blinds in seconds from your smartphone. You don't need a bridge, registration or remote control.

SMART CONNECTION

MotionBlinds Bridge

The basis for your automatic sun protection system: the MotionBlinds WiFi bridge. Once connected to your MotionBlinds wireless motors, it opens up new possibilities of intelligently controlling your sun protection - for example, using Google Assistant, Amazon Alexa or Smart Things as well as other web-based services.

WHENEVER AND WHEREVER

MotionBlinds Bridge app

Enhance the bridge with the MotionBlinds Bridge app. You can even control your privacy and sun protection using this app when you are out. Creating scenes and timers on the app is easy and intuitive and they can also be linked to the sunrise and sunset. Thanks to the bi-directional connection, the motors report the current position of the blinds back to the app accurately. Then you can keep an eye on everything.

1. Group your systems together by room.
2. Control individual systems separately.
3. Programme scenes for one or more systems.
4. Create time-controlled automation.
5. Check the current position of the system thanks to bi-directional connection.

The app is available in the download centre for iOS and Android under "MotionBlinds".

SAY IT

With voice control

Voice control - the clever idea for anyone who loves speed and flexibility. Because you operate your sun protection system without any remote control or app. Easy!

For this you can connect MotionBlinds motors to smart voice assistants such as Amazon Alexa or Google Assistant via the WiFi bridge and even retrieve predefined scenes.

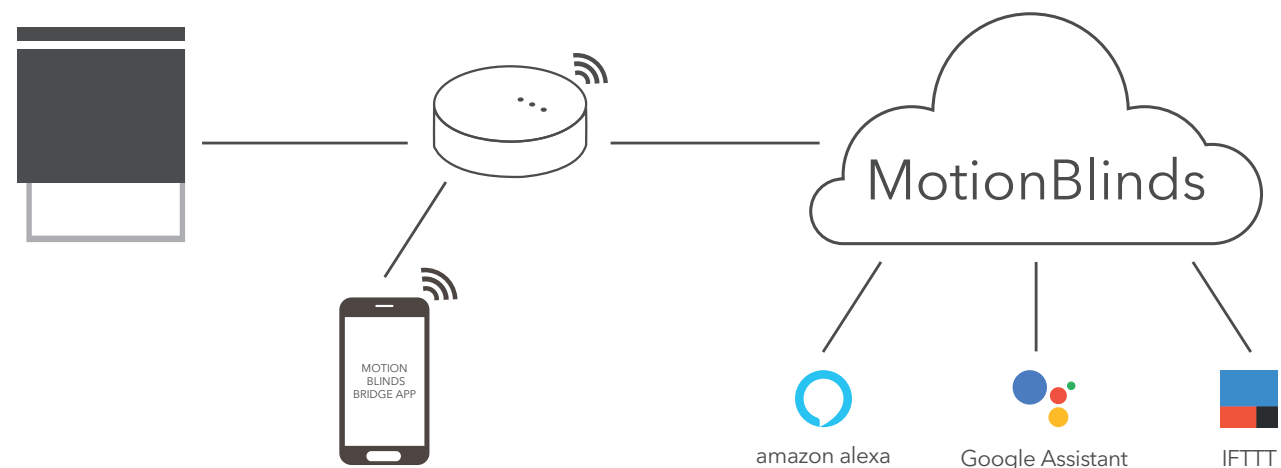

COUNTLESS POSSIBILITIES

Web-based home automation

The MotionBlinds bridge makes it possible for you to connect privacy and sun protection systems to various smart home systems. All you need is an internet connection via your home router and the WiFi bridge. Welcome to the world of smart sun protection!

In addition to operation via app or voice control, MotionBlinds can also be linked, for example, to the free web-based If-This-Then-That (IFTTT) service for interactive control. IFTTT offers hundreds of interfaces to other smart home systems and applications - and therefore even more possibilities for you.

EASY WITH WIRELESS

MotionBlinds wireless remote controls

Developed for convenience, MotionBlinds wireless remote controls make everyday life that bit easier: control your sun protection from the comfort of your sofa and have the flexibility to react to annoying glare from the sun. There is also a suitable operating option for conference rooms and other work environments.

JUST ONE CLICK

Table-top wireless remote control

The ideal solution for commercial buildings or meeting rooms: this elegant table-top wireless remote control is easy to use with the fingertips and has four different channels. Individual channels can be easily selected or deselected to create new groups and control multiple systems at once.

SIMPLE TO OPERATE

Magnetic wall-mounted wireless remote control

For motors with wireless functionality, there is an optional magnetic wall-mounted wireless remote control with four channels available. The bracket can be placed where you want it, making it easier to find and control your sun protection system. You can operate MotionBlinds WIRED motors using a wall switch provided in your home.

JUST A QUICK PULL

Pull cord on product

Move the roller blind to the required position as you go past - quickly done using the pull cord. This is an ideal solution for guests to use or when your remote control isn't to hand. The pull cord is standard with LITIO motors. This is the simplest and safest way to operate motorised systems. Anyone can do it!

Pull remote control

You'll also find all the benefits of the integrated pull cord in the pull cord remote control. It is not fastened directly to the product but can be placed anywhere in a house or apartment with the range of approximately 20 - 30 m. Just where you need it! And this intuitive version can easily be used by anyone too.

MOTIONBLINDS MOTORS

MOTIONBLINDS LITIO MOTOR

The LITIO battery drive is the ideal solution where there is no mains connection. It is simple to install without an electrician.

- Battery drive for roller blinds
- Controlled via bi-directional wireless protocol, MotionBlinds app or MotionBlinds Bluetooth app
- Charge cycle of up to 12 months
- Additional manual pull control on the product

Optional extras:
Remote controls
Voice control
Smart home

Ideal for tenants.

MOTIONBLINDS CENTRIO MOTOR

The low voltage CENTRIO motor offers all the benefits of a wireless motor and is either powered via a mains connection or by means of the optional battery pack.

- Low voltage motor for numerous products
- Controlled via bi-directional wireless protocol, MotionBlinds app or MotionBlinds Bluetooth app
- With mains connection: power supply
- No mains connection: external battery pack (charge cycle of up to 6 months)

Optional extras:
Remote controls
Voice control
Smart home

Suitable for modernisation or when a mains connection is already available.

MOTIONBLINDS WIRELESS MOTOR

The 230 volt WIRELESS motor can be controlled safely using the bi-directional wireless protocol or Bluetooth. It is suitable for new buildings but can also be retrofitted as long as there is a mains connection.

- 230 V wireless motor for roller blinds
- Power connection required
- Controlled via bi-directional wireless protocol, MotionBlinds app or MotionBlinds Bluetooth app
- Also available in optional SILENT version

Optional extras:
Remote controls
Voice control
Smart home

Ideal for retrofitting and modernisation.

MOTIONBLINDS WIRED MOTOR

The 230 volt WIRED motor offers easy entry level motorisation and is mostly suitable for home and apartment owners. It is operated from a wall switch provided on site or can be integrated into a BUS system.

- Wired motor (230 v) for roller blinds
- No wireless option
- Available in optional SILENT version

Optional extras:
Wall switch provided on site
Coupled to BUS system

Ideal for home and apartment owners.
